- OSF
- Version Control
- Dynamic Documents

Put your work all in one place with the Open Science Framework [Link](#)

- Pre-Registration
- Data
 - Host
 - Link to Dataverse
- Version Control
- More to Come

Write your code and your paper in the same file so you won't lose information or make copy and paste mistakes.

- Include tables by linking to a file, instead of a static image.
- Include number by linking to a value calculated by an analysis file, instead of a static number typed manually.
- Automatically update tables and numbers.
- Produce entire paper with one or two clicks.

Possible in Python, R, and to a lesser extent, Stata

- Jupyter—several (many?) languages
- R—use R Studio to manage projects with built-in version control, and R Markdown/knitr for publication-quality dynamic documents.
- Stata—combine with LaTeX for two click workflow
- Stata—use ‘markdoc’ ado for some dynamic ability.

Studio[®]

The Jupyter logo features a stylized orange arc that forms a partial circle around the word "jupyter". The arc is composed of two segments, one on the top and one on the bottom, meeting at the left and right sides. Four dark gray dots are positioned at the top-left, top-right, bottom-left, and bottom-right corners, completing the circular arrangement.

jupyter

Try them online:

- Jupyter
- R

Conclusion

OK, I'm convinced. How do I learn more?
 Seriously, how do I learn more?!
 I need to know.
